

ABSTRACT OF THE INVENTION

A portable accessory box is disclosed. The portable accessory box comprises:
a bottom plate; two side rectangular bodies fixedly connected to two sides of the
5 bottom plate; and a lower side plate fixedly connected to the lower side of the bottom
plate. The portable accessory box can further comprise an upper side plate fixedly
connected to the upper side of the bottom plate. The bottom plate includes a
hand-held hole for carrying and two fixed pieces used to fix the side rectangular bodies.
In addition, each of the side rectangular bodies comprises an embedded slot, and the
10 lower side plate and the upper side plate both include an inner side piece. When the
lower side plate and the upper side plate are folded inwardly, the inner side pieces can
be embedded into the embedded slots of the side rectangular bodies to divide each of
the side rectangular bodies into two rectangular sub-bodies and form a lower
rectangular body and an upper rectangular body between the side rectangular bodies.
